

Apexion IT & Security Infrastructure Protocol

Section 7.4: Secure Remote Work & VPN Infrastructure

To preserve data integrity, any employee working remotely must exclusively route their internet traffic through the official corporate virtual private network—the **ApexSecure VPN Gateway**.

Section 7.5: Device Compliance Regulations

- Remote connection is only allowed via **Company-Issued Workstations** running the pre-installed corporate endpoint security suite (CrowdStrike v6.2).
- Connecting to corporate databases, production servers, or internal code repositories via personal laptops or mobile devices is a severe compliance violation.

SECURITY REQUIREMENT: Multi-Factor Authentication (MFA) via the Okta Verify application must be triggered every 12 hours for all active VPN sessions. Failure to complete MFA within 3 minutes will automatically lock the user directory profile.

Section 8.1: Password Lifespan Policy

All active directory passwords must be changed every **60 days**. Passwords must be a minimum of 14 characters and contain at least one uppercase letter, one lowercase letter, one digit, and two distinct special symbols (e.g., @ , # , \$).
